Filled with data about the Earth, Moon, the planets, the stars, our Galaxy, and the myriad galaxies in deep space, this invaluable resource reveals the latest scientific discoveries about black holes, quasars, and the origins of the Universe. It includes

maps supported by detailed tables of the names, positions, magnitudes, and spectra of the main stars in each constellation along with key data on galaxies, nebulae, and clusters. MNASSA wrote, "This book fills a niche with detailed astronomical data and concise explanations, all at an accessible level it is an excellent resource, and probably will be the first book I shall reach for. Vols. 1898- include a directory of publishers. The Lloyd's Register of Shipping records the details of merchant vessels over 100 gross tonnes, which are self-propelled and sea-going, regardless of classification. Before the time, only those vessels classed by Lloyd's Register were listed. Vessels are listed alphabetically by their current name. A catalog of all published HI observations of external galaxies has been compiled. Its construction is briefly described. It contains almost 20,000 entries for over 10,000 galaxies based on more than 570 references. Here the reference catalog is presented. It contains the HI data basically just as they were originally published. No numerical conversions were made and no error correction was attempted.

Abstracts Published in Astron. 1. and BIII. A. A. S.	This
book looks at the broad field of engineering science through the lens of nonlinear	
approaches. Examples focus on issues in vehicle technology, including vehicle	
dynamics, vehicle-road interaction, steering, and control for electric and hybrid	
vehicles. Also included are discussions on train and tram systems, aerial vehicles,	
robot-human interaction, and contact and scratch analysis at the micro/nanoscale.	
Chapters are based on invited contributions from world-class experts in the field	
who advance the future of engineering by discussing the development of more	
optimal, accurate, efficient, and cost and energy effective systems. This book is	
appropriate for researchers, students, and practicing engineers who are interested in	
the applications of nonlinear approaches to solving engineering and science	
problems. Euripides' Ion is a highly complex and elusive play and thus poses	
considerable difficulties to any interpreter. On the basis of a new recension of the	
text, this commentary offers explanations of the language, literary technique, and	
realia of the play and discusses the main issues of interpretation. In this way the	
reader is provided with the material required for an appreciation of this entertaining	
as well as provocative dramatic composition.
